

Bosch alarm components

Solution 6000 LCD code pad

- Used to key in your PIN to arm or disarm your security alarm system
- Large graphical display with LED backlight
- Includes all the arming control functions including home area arming, multiple area functionality and zone descriptions
- Alphanumeric text prompting / programming with custom installer static display screen
- Used in residential or commercial applications

Radion remotes

- Remotes to suit the Bosch Solution 6000 alarm system
- Allows you to arm and disarm the security system or send a panic code to the monitoring station (Press both the lock and unlock buttons simultaneously for two seconds to send a panic alarm)
- LED flashed to indicate a signal was sent to your security system
- Can be operated from outside your home, garden or garage
- Two option buttons are user-defined to perform additional functions

Standalone remotes

- Activate panic alarms
- Can be operated from outside your home, from the garden or garage

Duress pendant

- 2 button panic pendant
- Can be worn around your neck
- Pressing the button will send an emergency signal to the monitoring station
- Most commonly used for medical emergencies (providing the alarm is monitored)

Motion sensors

- Detects intruders
- Can either be wired or wireless depending on house construction
- Installed in hallways and main rooms in areas away from heat sources
- Pet tolerant

External siren with blue strobe

- Mounted outside your home where it is clearly visible to act as a deterrent
- High siren volume to scare away intruders
- Light flashes whenever there has been an alarm activation
- Hardwired to your alarm system control panel (depending on house construction)
- Waterproof

Combo siren with blue strobe

- Mounted outside your home where it is clearly visible to act as a deterrent
- High siren volume to scare away intruders
- Light flashes whenever there has been an alarm activation
- Hardwired to your alarm system control panel (depending on house construction)
- Waterproof

Internal siren

- Mounted on the ceiling inside your home
- High siren volume to scare away intruders
- Hardwired to your alarm system control panel

Reed switches

- Used with wired or wireless security systems
- Used in exterior opening doors and windows
- Activates the alarm panel and sirens
- Sends an alarm event to the monitoring station

Smoke detectors

- Used in both wired and wireless security systems
- Activates a siren when smoke or fire is detected
- If your security system is monitored the alarm system also communicates a fire alarm to the RACV monitoring station

Radion receiver

- Communicates with wireless equipment and is mounted external to the control box

Control panel

- The brains of the alarm system, relaying information to and from the detection devices, code pad, remotes and sirens
- If the alarm is monitored it also relays information to the RACV security monitoring station via a wireless communication device
- Fully tamper-proof box
